

Problem 1: Student Grade Calculator

Write a Python program that:

1. Takes a student's name as input.
2. Takes marks for **3 subjects**.
3. Calculates:
 - Total marks
 - Average marks
4. Determines the grade using:
 - 80–100 → A+
 - 70–79 → A
 - 60–69 → B
 - 50–59 → C
 - Below 50 → F
5. Displays the result using a formatted string (f-string).

Example Output

Student Name: Rahim

Total Marks: 245

Average: 81.67

Grade: A+

Problem 2: Simple Shopping Cart

Write a Python program that:

1. Takes the customer's name as input.
2. Takes the **names and prices of 3 products** as input.
3. Calculates:
 - Subtotal
 - Discount
 - Final Total
4. Determines the discount using:
 - 5000 or above → 20% discount
 - 3000–4999 → 10% discount

- 1000–2999 → 5% discount
 - Below 1000 → No discount
5. Displays the shopping summary using a formatted string (f-string).

Example Output

Customer Name: Rahim

Product 1: Keyboard

Price: 1500

Product 2: Mouse

Price: 800

Product 3: Headphone

Price: 2000

Subtotal: 4300

Discount: 430

Final Total: 3870

Formula

Discount = Subtotal × Discount Rate

Final Total = Subtotal - Discount

GitHub Submission Instructions

Submit both Python programs through **GitHub**.

1. Create a new GitHub repository named something like:
python-assignment
2. Add these two files to the repository:
 - student_grade_calculator.py
 - shopping_cart.py
3. Make sure both programs run correctly and contain your completed solutions.
4. Commit and push the files to GitHub.
5. Set the repository visibility to **Public**

6. Copy your **GitHub repository link**.

Submission Format

- Submit the repository link
